

BLUE TUBE UV

BENEFITS

Fights Mold, Germs, Allergens, Odors

Improved Indoor Air Quality

Cleaner Central Air System

Maintenance & Energy Savings

Chemical-Free Disinfection

Safe & Effective

Breathe Easy!

Blue-Tube UV® improves indoor air quality by killing airborne mold, bacteria, viruses, and allergens. It also keeps the interior of the air system cleaner (the cooling coils in particular) which saves on costly coil cleaning services and also extends the life of the air system.

The Original Low-Voltage UV Light Kit

Blue-Tube UV® is a germicidal UV light system which is installed inside the central air system (furnace or air handler) for the purpose of preventing mold growth on the evaporator coils and to promote improved indoor air quality throughout the home by sterilizing airborne biological contaminants.

Blue-Tube UV® is the original patented low-voltage UV light kit and is the most popular germicidal UV light product in the world. There are several models to choose from including one or two year lamps, high or low voltage power, and odor control options.
